

Nicolas Japas

Senior Full-Stack AI Engineer · LLM Systems, Product & Cloud

Lisbon, Portugal • +351 918 254 312 • German & Argentinian Citizen (no visa required)

nicolasjapas@gmail.com • linkedin.com/in/nicolas-japas • github.com/nicojapas

SUMMARY

Full-stack engineer shipping production LLM systems end-to-end, from the retrieval layer (hybrid search, chunking, re-ranking) and agent orchestration through the APIs and interfaces that expose them to real users. Currently building a live conversational AI product for an enterprise client, owning frontend, API, agent, and ingestion services. Deep AWS background in event-driven serverless architecture, with production experience in distributed systems design and infrastructure-as-code. AWS SAA certified, HashiCorp Terraform Associate.

CORE SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C++, Bash

AI / LLM: RAG (hybrid search, chunking, re-ranking, metadata filtering), LangGraph, LangChain, Tool Calling, Amazon Bedrock, OpenSearch Serverless, FAISS, Embeddings (Titan v2), Guardrails, vLLM, Voice Agents

Backend: FastAPI, Node.js, REST APIs, Event-Driven, OpenAPI, GraphQL, Pydantic, asyncio, Pytest, Sentry

Frontend: React, Next.js, TypeScript, Vite, MUI, Tailwind, Webpack, Playwright, Jest, Cypress

Cloud: AWS (Lambda, Bedrock, OpenSearch, EventBridge, API Gateway, S3, DynamoDB, Glue, CloudWatch, Cognito, IAM), AWS CDK; Cloudflare (Workers, Pages, D1, KV, R2)

Infrastructure: Terraform, CloudFormation, Docker, Kubernetes, Microservices, GitHub Actions, CI/CD, IaC

Databases: PostgreSQL, DynamoDB, MongoDB, MySQL, SQLAlchemy, DuckDB

AI-Native Workflow: Cursor, Claude Code; parallel agentic development with repo-level instrumentation

CERTIFICATIONS

AWS Solutions Architect Associate (SAA-C03), 2026 | **HashiCorp Terraform Associate 004**, 2026

EXPERIENCE

Senior Full-Stack AI Engineer (B2B Contract) - PwC AppDev | Remote Jul 2026 – Present

- Work inside the retrieval layer of a live production conversational AI assistant for an enterprise client: hybrid search over Amazon OpenSearch Serverless (vector kNN with metadata filtering, SigV4 auth), Bedrock Titan v2 embeddings, and chunk re-ranking.
- Deliver across services: React 18 SPA, FastAPI/Pydantic API on AWS Lambda, LangGraph agent, and a scheduled ingestion service; function calling and structured responses (text, action buttons, data cards).
- Scheduled crawler diffs source-of-truth content into the knowledge base to keep retrieval current.
- Test-driven delivery; structured logging and monitoring for service behaviour, I/O, and performance; ship through QA, security review, and deployment alongside data scientists and DevOps.

Independent Senior Software Engineer / Founder | Remote Nov 2025 – Present

- Built and deployed a self-hosted LLM inference stack (Modal, vLLM, Qwen3) with an OpenAI-compatible API endpoint for multi-provider integration, eliminating vendor lock-in and reducing data privacy exposure.
- Founder of **Japas Audio**; built **Digital Decay**, a commercial VST plugin (C++, JUCE, DSP), available at japasaudio.com ↗. Owned the full signal chain from DSP design through 3D UI and commercial delivery.

Full-Stack Engineer, Backend & Cloud - Brother ISM GmbH | Germany (remote) Jul 2023 – Oct 2025

- Built core backend services for Myze, a B2B SaaS platform for industrial print-on-demand serving ~30 companies across Europe; designed event-driven serverless infrastructure (Lambda, EventBridge, API Gateway, DynamoDB) for multi-step order workflows and cross-company fulfillment.
- Designed multi-tenant REST APIs (OpenAPI) with JWT/OAuth2 and Cognito auth; built time-limited demo accounts via EventBridge, with provisioning on signup and tier downgrade on trial expiry; enabled non-EU shipping with automated customs docs (ShipStation, SendCloud) and Shopify order ingestion (GraphQL).
- Owned full-stack delivery on customer-facing features, from API design through React/TypeScript UI; maintained and migrated unit and E2E test suites (Pytest, Jest, Cypress, Playwright).

Software Engineer - DataZoo GmbH | Germany (remote) Jun 2021 – Jun 2023

- Productionized ML forecasting models via SageMaker-backed APIs, bridging data science output and production systems for industrial time-series applications.
- Built interactive tooling for large-scale industrial time-series data; implemented processing pipelines (DuckDB, Datashader) and custom JupyterLab visualization components (Plotly) for high-density datasets.

Earlier (2005–2021): Mechanical Engineer (XPAK USA, TECNA) and University Professor (UNA, Argentina); relocated to Germany in 2018 and transitioned to software engineering.

TECHNICAL PROJECTS [full list ↗]

AI Document Q&A - RAG service with hybrid retrieval [FastAPI, LangChain, FAISS, Pydantic, multi-provider LLM routing] ↗

Menger World - Real-time voice AI agent driving a live WebGL fractal [WebGL, GLSL, FastAPI, LangGraph, ElevenLabs] ↗
